It's Galaxy Season!

Galaxies abound in the constellations of Virgo, Coma Berenices, Canes Venatici, and Ursa Major. Summertime constellations are peeking over the Eastern horizon, with Vega shining in the NE sky.

How to Use the Chart

South is at the bottom, if you hold the chart “up” against the sky, facing South, then East will be to your left and West to the right. (Or if you hold the map upside-down and face North, East will be to the right, West to the left.)

On the chart, the orange dashed line shows the celestial Equator; the green dashed-dotted line the Ecliptic. The Milky Way is outlined with a blue dotted line.

Date	Time
May 1	10:30 PM (EDT)
May 8	10:00 PM
May 15	9:30 PM
May 22	9:00 PM
May 29	8:30 PM

Because of the Earth’s motion around the Sun, the time for this chart changes slowly over time, roughly 1/2 hour earlier every week:

Planets

We have no evening planets for several months.

However, two dwarf planets are hiding in plain sight: Haumea is in Boötes, and Makemake in Coma Berenices, though both are magnitude 17 objects, requiring long-exposure imaging to detect them.
