

Constellations

AND - Andromeda - *the Chained Maiden*
 AQL - Aquila - *the Eagle*
 AQR - Aquarius - *the Water Bearer*
 ARI - Aries - *the Ram*
 AUR - Auriga - *the Charioteer*
 BOO - Boötes - *the Herdsman*
 CAM - Camelopardalis - *the Giraffe*
 CAP - Capricornus - *the Goat*
 CAS - Cassiopeia - *the Queen of Ethiopia*
 CEP - Cepheus - *the King of Ethiopia*
 CET - Cetus - *the Whale*
 CRA - Corona Australis - *the Southern Crown*
 CRB - Corona Borealis - *the Northern Crown*
 CYG - Cygnus - *the Swan*
 DEL - Delphinus - *the Dolphin*
 DRA - Draco - *the Dragon*
 EQU - Equuleus - *the Little Horse*
 ERI - Eridanus - *the River*
 FOR - Fornax - *the Furnace*
 GEM - Gemini - *the Twins*
 GRU - Grus - *the Crane*
 HER - Hercules - *Hercules*
 LAC - Lacerta - *the Lizard*
 LYN - Lynx - *the Lynx*
 LYR - *the Harp*
 MIC - Microscopium - *the Microscope*
 OPH - Ophiuchus - *the Serpent Bearer*
 ORI - Orion - *the Hunter*
 PEG - Pegasus - *the Winged Horse*
 PER - Perseus - *the Hero*
 PHE - Phoenix - *the Phoenix*
 PSA - Piscis Austrinus - *the Southern Fish*
 PSC - Pisces - *the Fish*
 SCT - Scutum - *the Shield*
 SGE - Sagitta - *the Arrow*
 SGR - Sagittarius - *the Archer*
 TAU - Taurus - *the Bull*
 TRI - Triangulum - *the Triangle*
 UMA - Ursa Major - *the Great Bear*
 UMI - Ursa Minor - *the Lesser Bear*
 VUL - Vulpecula - *the Little Fox*

How to Use the Chart

South is at the bottom, if you hold the chart “up” against the sky, facing South, then East will be to your left and West to the right. (Or if you hold the map upside-down and face North, East will be to the right, West to the left.)

On the chart, the orange dashed line shows the celestial Equator; the green dashed-dotted line the Ecliptic. The Milky Way is outlined with a blue dotted line.

Date	Time
Nov 1	9:00 PM (EDT)
Nov 8	7:30 PM (EST)
Nov 15	7:00 PM
Nov 22	6:30 PM
Nov 29	6:00 PM

Because of the Earth’s motion around the Sun, the time for this chart changes slowly over time, roughly 1/2 hour earlier every week:

Planets

Saturn is easy to find in the S sky below the Great Square of Pegasus and the bright star Fomalhaut hugging the southern horizon.

Jupiter returns to the evening sky, hanging low in the ENE between the horns of Taurus but rising to nearly overhead by midnight. **Mars** remains a later-night object - rising after 10PM mid-month edging closer to Praesepe in Cancer before migrating back into Gemini.

Uranus and **Neptune** are findable in binoculars (and a finder chart) in Taurus (near the Pleiades) and Pisces, respectively. Finally **Venus** sets soon after the Sun, low in the SW in Sagittarius.
