The Water Constellations

Saturn takes center stage among mostly dim constellations with a “water” theme: Fish, rivers, sea monsters (and sea goats) populate the southern skies! Use Saturn as a guidepost to identify them all!

How to Use the Chart

South is at the bottom, if you hold the chart “up” against the sky, facing South, then East will be to your left and West to the right. (Or if you hold the map upside-down and face North, East will be to the right, West to the left.)

On the chart, the orange dashed line shows the celestial Equator; the green dashed-dotted line the Ecliptic. The Milky Way is outlined with a blue dotted line.

Date	Time
Nov 1	10:30 PM (EDT)
Nov 8	9:00 PM (EST)
Nov 15	8:30 PM
Nov 22	8:00 PM
Nov 29	7:30 PM

Because of the Earth’s motion around the Sun, the time for this chart changes slowly over time, roughly 1/2 hour earlier every week:

Planets

Venus is in Libra, visible, 1 hour before sunrise

Mars is in Ophiuchus, setting just after the Sun

Jupiter in Gemini, rising ~8:30 PM

Saturn is in Aquarius, observable all evening

Uranus is in Taurus, near the Pleiades - up all night

Neptune is in Pisces, NE of Saturn.
