How to Use the Chart

South is at the bottom, if you hold the chart “up” against the sky, facing South, then East will be to your left and West to the right. (Or if you hold the map upside-down and face North, East will be to the right, West to the left.)

On the chart, the orange dashed line shows the celestial Equator; the green dashed-dotted line the Ecliptic. The Milky Way is outlined with a blue dotted line.

Date	Time
Dec 1	9:00 PM (EST)
Dec 8	8:30 PM
Dec 15	8:00 PM
Dec 22	7:30 PM
Dec 29	7:00 PM

Because of the Earth’s motion around the Sun, the time for this chart changes slowly over time, roughly 1/2 hour earlier every week:

Planets

Mercury peeks above the eastern horizon just before sunrise at the beginning of the month, best between the 6th and 8th.

Venus, and **Mars** are all close to the Sun this month.

Jupiter in Gemini, rising just after sunset

Saturn is in Aquarius, setting around 11:30 PM

Uranus is in Taurus, near the Pleiades - up all night

Neptune is in Pisces, up all evening
